Utah COVID-19 Crisis Standards of Care Protocol

For patients being considered for ICU/ventilator care

**Step 1)** Shared Decision Making for ICU/ventilator use; and assess for non-ICU care criteria

**Step 2)** CTO makes frequent assessments of ICU/ventilator supply relative to anticipated patient demand

**Step 3)** Active ICU/ventilator withdrawal via ongoing Crisis MSOFA Cutoff determination

**Step 4)** Crisis MSOFA Cutoff no longer needed; communicate with Incident Command and State

Communicate Crisis MSOFA Cutoff to Incident Command and State for load leveling

**Non-ICU Care Criteria:**
- DNR
- Severe and irreversible acute or chronic neurologic condition
- Severe acute trauma with a REVISED TRAUMA SCORE <2
- Severe burns with <50% anticipated survival
- Cardiac arrest without easily identifiable AND reversible cause
- Incurable, advanced metastatic cancer, causing organ dysfunction
- MSOFA greater than 11, as initial cutoff
- MSOFA greater than the Crisis MSOFA Cutoff determined in Step 3

ICU Care

ICU/ventilator capacity adequate

ICU/ventilator capacity NOT adequate
